

Lets Get Started Specifying Your Control Panel!

Each Panel is custom made to your track plan and specifications.

Below is a list of questions that will get us started, I may have more as we go along.

Do you have a track plan in electronic form?

If so please include it.

How big is your layout?

How much space do you have for the panel or how big/small do you want it to be?

Do you have color preferences for the track plan/blocks?

What are you using for Track Power?

DCC or conventional?

How many blocks do you want to control?

Do you have block occupancy detectors that you wish to have indicated on the panel?

Do they already have LED terminals?

How many turnouts do you wish to control?

What are you using for turnout motors?

Do you have a power supply for them already?

Do you want LEDs on the panel to indicate turnout direction?

How many? 1 for divergent, or 1 for clear/1 for divergent?

What colors?

How many accessories do you wish to remote control?

List them.

What do they use for switches/controls?

Do you have a power supply for them already?

I generally use mini toggle switches, if you have special wants or desires, please let me know.

Do you want me to build a frame for your panel?

How will you mount the panel to the layout?

Mount to face of layout - will it need legs, or

Mount on free standing cabinet - I will need the dimensions.

How would you like the wood frame finished - Stain/paint/finish yourself?

I look forward to serving your needs.

Rob
